Male Reproductive Systemâ€™ Anatomy and Physiology | Request PDF

The function of the male reproductive system is to produce sperm and transfer them to the female reproductive tract. The paired testes are a crucial component in this process, as they produce both sperm and androgens, the hormones that support male reproductive physiology. In humans, the most important male androgen is testosterone. Several accessory organs and ducts aid the process of sperm maturation and transport the sperm and other seminal components to the penis, which delivers sperm to ...

27.1 Anatomy and Physiology of the Male Reproductive
