Europe accounts for around 20% of the global cereal production and is a net exporter of ca. 15% of that production. Increasing global demand for cereals justifies questions as to where and by how much Europeâ€™s production can be increased to meet future global market demands, and how much additional nitrogen (N) crops would require.

Breakfast cereal is a breakfast food made from processed cereal grains and often eaten for breakfast, primarily in Western societies. It is most often mixed with milk, but can also be eaten with yogurt or fruit.

### **Breakfast cereal - Wikipedia**

With the progress in research, scientists have discovered new sources of Î²-glucan. Conventionally, cereal is perhaps the oldest source from which Î²-glucan has been extracted, or these sources in unpurified form have been used for the development of food products.
