

### **irrigation engineering by p pdf**

Irrigation is the application of controlled amounts of water to plants at needed intervals. Irrigation helps to grow agricultural crops, maintain landscapes, and revegetate disturbed soils in dry areas and during periods of less than average rainfall.

### **Irrigation - Wikipedia**

The first schemes for irrigation commenced in the latter half of the nineteenth century. Goulburn Weir, constructed from 1887 to 1891, was the first major diversion structure built for irrigation development in Australia.

Sprinkler irrigation is a method of applying irrigation water which is distributed by pipes by pumping and irrigate entire soil surface through spray heads.

## **Sprinkler Irrigation - Jain Irrigation Systems**

Along these lines, Allen et al. (1997) and Burt et al. (1997) proposed new concepts to clearly distinguish between consumptive and non-consumptive uses, beneficial and non-beneficial uses, and reusable and non-reusable fractions of the non-consumed water diverted into the irrigation system or sub-system under consideration.

One aspect of green engineering and sustainable design is how man interacts with the hydrologic cycle. This includes how stormwater runoff is managed and whether runoff is viewed as a waste product or an opportunity. Rainwater harvesting is a critical component in integrated urban water management.
