In engineering, physics and chemistry, the study of transport phenomena concerns the exchange of mass, energy, charge, momentum and angular momentum between observed and studied systems.

Public Transport Guided Systems are one of the safest transport modes; however, there is still the risk that a fire could break out. Toxic effect level measurement of materials and their toxicity classification is very critical and also difficult to assess in estimating real safe evacuation conditions of passengers.

The reason that O<sub>2</sub>, despite a larger MW 32, has a smaller diameter than N<sub>2</sub> MW 28, lies in the electronic structure of the molecules. As indicated by quantum mechanical theory of molecules, the electrons of a
